

Durable core drill now available locally

DIAMOND Products director, Darryl Gray, says the new Shibuya core is the smallest, lightest and most portable core drill in the comprehensive range of Shibuya products, and is ideal for drilling holes 100 mm and smaller.

He says the Shibuya core drill is durable and robust and is best-suited for specialised smaller

scale drilling projects such as air conditioning and anchor drilling.

Co-director, Brian Clark, adds that the Shibuya range comes in two relevant diameter models, the 12mm to 60mm and the 60mm to 120mm.

"The Shibuya range comes with a water collection ring that contains any water that could be spilled while drilling.

"Another user-friendly aspect of the drill is the fact that there are no gears, so the user simply has to turn the drill on and off."

Clark highlights the fact that the entire range meets all the necessary SABS certification requirements and has a two-year warranty

across its entire range."

Diamond Products stocks a full range of Shibuya spares, and repairing the core drill typically takes less than eight hours.

The company offers free customer training as part of its after-sales service package.
